

SYLVANIA Headlight Restoration Kit

Hazy, Yellowed Headlights? Restore original clarity and vision in minutes!

New plastic headlight lenses have a factory applied UV coating to protect the plastic from degradation. Over time, harsh UV rays and road debris penetrate the factory UV coating resulting in hazing and yellowing. The hazing is not only unsightly, it is a serious safety concern. Hazed lenses reduce down road illumination by up to 66% and increase oncoming driver glare by scattering light upward.

A permanent restoration...

Unlike other lens restoration products designed just to remove the haze and yellowing, the SYLVANIA Headlight Restoration Kit restores the lens to like-new clarity and protection using our proprietary UV Block Clear Coat. This easy to apply durable coating has engineered polymers as well as active and passive UV blockers to protect the plastic from future deterioration. No other product offers this level of protection!

Drive Safer: 3 Key Benefits

- Restores clarity
- Increases visibility and safety
- Improves appearance and increases value
